1 Go into your **Computer's Library** (Option click '**Go**' in your **Computer's Main Menu** then in the **drop down** select Library)

2 When you are in your computer's Library, Select:
   Application Support > Cheetah3D > Materials
3 When you get to **Materials**:
   Click on the **New Folder** icon in the **Material Library's Menu**

4a) A **New Untitled folder** will appear in the **List of Materials**
      Name the New Folder whatever you want (In this case Car)
4b) The Folder will jump to it's alphabetical place in the **List of Materials**.

5 In Cheetah 3D and in the **Material Browser** Call up the materials you
   want in the new (Car) folder. As an example I just placed
   'Tinted Glass FB' (FB =Frank Beckmann: That is the way I keep track of
   who provided the material) and the Steel Matt.
